## Abstract of JP2002027386

**PROBLEM TO BE SOLVED:** To record the name of a form data file being referred at the time of outputting an image data file when a corresponding meta-data file is generated.

**SOLUTION:** A personal computer 2 (Fig. 1) receives an image data file from an electronic still camera (Fig. 1) and records it in a recorder 22 (Fig. 1) (S101). The personal computer 2 (Fig. 1) sorts and arranges the image data file (S102). An operator selects the image data file (S103) and then selects a form data file (S104). Subsequently, the personal computer 2 (Fig. 1) generates a meta-data file corresponding to the image data file (S105). The image data file includes the names of image data file and form data file. The personal computer 2 (Fig. 1) records the meta-data file and the form data file on a CD 27 (Fig. 1) (S106). When an operator sets the CD 27 (Fig. 1) in the personal computer 2 and designates display of a reproduced image, the reproduced image is presented on a display 25 in a display layout described in the form data file.
